

## **Build FM NRSC masks for SIGLENT SSA3000X/SVA1000Xs using a Python script**

**February 13, 2020**

Many broadcast applications require monitoring a transmitter and observing the output amplitude vs. frequency. For FM radio applications, a common mask is defined by the National Radio Systems Committee (NRSC) and is commonly referred to as the FM NRSC mask.

A very helpful SIGLENT owner, Dan from [Alabama Broadcast Services, LLC](#), built an FM NRSC Mask tool using our original [AM NRSC mask python code](#)

This program was built using Python 2.7 and helps create masks around user-defined center frequencies.

Here is a link to the zipped download of the finished Python code: [SSA3XNRSC\\_FM\\_Limit.zip](#)

### **North American Headquarters**

SIGLENT Technologies America, Inc  
6557 Cochran Rd Solon, Ohio 44139
